

Yuri Gagarin's 108-minute flight April 1961 opened an era of human space travel, but also spawned an entire branch of medical science, based on that one historic flight. The reason is that when he returned, his body was in near critical condition. What they discovered is that he had left the earth's pulsed electro-magnetic fields (PEMF's) and it nearly destroyed his mind and his body. When he returned he was like a battery operated toy, completely out of power – he had been drained in several key ways.

What they went on to discover was that in a matter of MINUTES of NO exposure to healthy PEMF's, cell metabolism breaks down causing almost instant bone loss, weak and tired muscles, suppressed metabolism, local disorientation and overall mental depression.

Probably the most valuable lesson learned that day, at the lifelong expense of Mr. Gagarin, was the critical necessity of not just pulsed electro-magnetic devices, but rather, the device specifically designed by and for the astronauts/cosmonauts – The QRS Quantron Resonance System – which has been used in every space suit and Russian space station since.

The Quantron Resonance System (QRS) was developed after 20 years of research by a team of international scientists, working specifically with the Russian space program, and was used in the program for the MIR space station.

The QRS was initially brought forward by Dr. Gerhard Fischer, PhD from Liechtenstein (Europe), with the assistance of German scientists Dr. Ulrich Warnke, PhD, professor and Director of the Department of Biomedicine at the University of Saarland (Germany), and the late Dr. H. L. König, PhD, and Chairman of Electrophysics at the Technical University of Munich (Germany). Dr. König speciality was studying how high frequency electro pollution affects the human body.

QRS won the gold medal of medicine in Geneva, Switzerland in 1998 and holds 3 world patents.

The QRS is used by people on every continent and for almost every physical ailment. The QRS is in use by untold health care practitioners worldwide. Coming into focus now are all the professional, world class and Olympic athletes. And the story that usually makes it on the back page, the human interest story, is the fact that many valuable, champion race horses “wouldn't miss a day” using the QRS. And the best part is that the QRS is being used in hundreds of thousands of homes all over the globe by people who want to optimize their own health, as well as the health of their loved ones and their pets. The QRS is safe, gentle and effective for humans and animals alike! <http://www.electromeds.com/qrs-quantron/>
